Footnotes

National Influenza schedule in Europe ([www.ecdc/vaccine\\_scheduler](http://www.ecdc/vaccine_scheduler))

# Influenza vaccination coverage in Europe (VENICE Study)

**Figure 2.1.4.** Reported seasonal influenza vaccination coverage (%) in the older population in 23 EU/EEA Member States for 2008–2009 and 2010–2011 influenza seasons

# Couverture vaccinale grippe en France (InVS)

## Couverture vaccinale anti-grippale dans les populations cible

	2008		2009		2010	
	Couverture	IC95%	Couverture	IC95%	Couverture	IC95%
65 ans et plus	62,7%	58,9-66,4	62,6%	58,1-67,0	61,0%	56,7-65,0
< 65 ans en ALD-grippe	33,6%	26,2-42,0	35,5%	28,0-43,8	46,6%	39,7-53,6

# Couverture vaccinale grippe, professionnels de santé, InVS

## Couverture vaccinale grippe chez les professionnels de santé

2008-2009		2009-2010		2010-2011	
Couverture	IC95%	Couverture	IC95%	Couverture	IC95%
24,9%	17,9-33,5	33,9%	25,4-43,6	27,6%	21,3-34,9

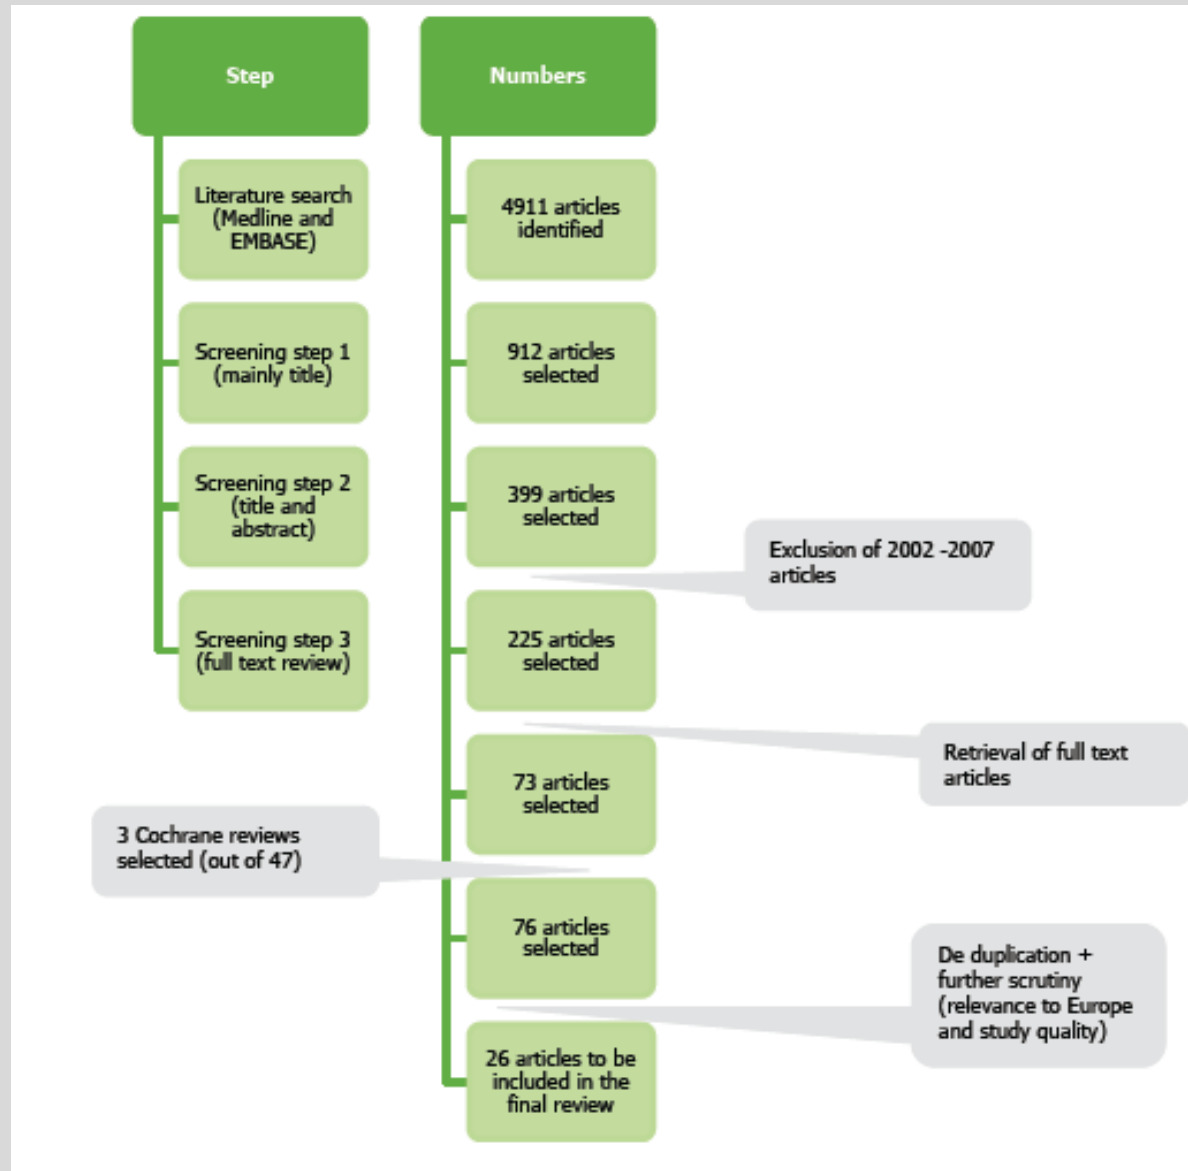

# Key questions on the barriers of seasonal influenza vaccination coverage in Europe

- Drivers for increased seasonal flu vaccination coverage in the risk/target groups?
- Improvement of current low rates of healthcare workers' influenza vaccination?
- Good practice that increase vaccination uptake in all groups?

# Methodology

- Review Literature on specific risk groups
  - Older age groups: 19/28 countries:  $\geq 65$  Y.
  - Pregnant women: 19/28 countries
  - Children ( $< 2Y$ ,  $< 5Y$ ): 7 countries
  - Healthcare workers
  - Individuals over 6 months of age with chronic medical conditions:
    - Chronic respiratory diseases,
    - Persons with a compromised respiratory function
    - Chronic cardiovascular diseases
    - Chronic metabolic conditions
    - Chronic renal and hepatic diseases
    - Persons with acquired or congenital immunodeficiency
    - Persons with morbid obesity:

# Review of scientific literature on barriers of seasonal influenza vaccination coverage in EU (1946-2012)

# Interventions to increase flu vaccination in the Elderly people

Design Study	Intervention	Grade of evidence/ Results
<p><b>Cochrane Systematic review</b> (Thomas et al. (Vaccine 2010) 44 RCT : US (25), Canada (7), Australia (4), UK (4), Denmark (1), Spain (1), Puerto Rico (1), New Zealand (1) 21 RCT</p>	<p><u>Increasing community demand</u></p> <p>-Reminders participants (postcard, letter, personalized phone calls)</p> <p>-Educating participants + offer vaccination</p>	<p>Low grade Positive effects: 9/21 OR= 1,61 (1,49-1,74)</p> <p>Very Low grade OR 3,20 (1,91-5,66)</p>
<p>2 RCT</p>	<p><u>Increasing access</u></p> <p>-Home visits -Free vaccines</p>	<p>Moderate grade OR: 1,3 (1,05-1,61)</p>

# Interventions to increase flu vaccination in the Elderly people

Design study	Intervention	Grade of evidence/ Results
<p><b>Cochrane Systematic review</b> (Thomas et al. (Vaccine 2010) 44 RCT : US (25), Canada (7), Australia (4), UK (4), Denmark (1), Spain (1), Puerto Rico (1), New Zealand (1)</p>	<p><u>Provider or system based interventions :</u></p>	<p>Low positive effects with high risk bias RCT</p>
<p>4 RCT</p>	<p>-Reminders to physicians</p>	<p>1/ 4 RCT : OR= 3,79 (2,31-5,55)</p>
<p>4 RCT</p>	<p>- Facilitators within the clinics (good practices, visit of facilitators )</p>	<p>¾ RCT : OR=2,11 (1,27-3,49), to 292,81 (18,16-4721)</p>
<p>3 RCT</p>	<p>- Education and feedback to physician</p>	<p>1/ 3 RCT : OR= 3,43 (2,37-4,97)</p>

# Interventions to increase flu vaccination in the Elderly people

Design study	Intervention	Grade of evidence/ Results
1 RCT= 84 community Pharmacies (Usami et al., J Pharmaceutical Society Japan 2009)	Impact of community pharmacists	High grade Positive effects Uptake 8,7% (95 CI= 2,2-15,2%)
Case control (11 European countries) Onder et al., 2008 J Am Med Dir Association: N= 4007 elders + Control UK: Dexter et al.,BMJ Open 2012 N= 795 GP	<u>Increasing access:</u> Interdisciplinary team with a Case manager (planning flu campaign,sending personal invitation, producing performance report)	OR= 2,08 (1,81-2,39)  OR= 1;45 (1,1- 1,92)
Cross sectional survey Italy N= 25 183 Chiatti et al., 2011, BMC Public Health	Socioeconomic determinants (use of health care)	Highest rates ≥ 85 Y. OR= 1,99 (1,77-2,21) Suffering from chronic conditions: OR= 2,06 (1,9-2,24)

# Interventions to increase flu vaccination in the people with chronic conditions

Design of studies	Intervention	Grade of evidence/ Results
<p>1RCT Walter et al., J Clin Out management, 2008 (USA) (N= 8912 first year, 8355 next year)</p>	<p>Asthmatic patients (children, adults)</p> <p>Reasons for not getting the vaccine</p> <p><u>Increasing demand to asthmatic patients</u></p> <p><u>Increasing access</u></p>	<p>Low quality</p> <ul style="list-style-type: none"> <li>- Misperceptions about flu caused by vaccine (adults : 48 %, children 39%) and fear of side effects</li> <li>- No impact of educational message +postcard reminder</li> <li>- Impact of medical insurance and age &gt; 65 Y</li> </ul>

# Interventions to increase flu vaccination in the people with chronic conditions

Design of studies	Intervention	Grade of evidence/ Results
<p>2 RCT Esposito et al. Vaccine 2009 (N= 285)</p> <p>Fiks et al., Pediatrics 2009 N= 10667 first year, 11919 next year)</p>	<p><u>Increasing demand in asthmatic patients</u> -Reminders participants (postcard, letter, personalized phone calls) + vaccination in same clinic or another clinic</p> <p><u>Provider</u> Electronic health reminders alerts to physicians</p>	<p>Best rates of increased coverage to 10 to 21%</p> <p>Very Low grade <b>OR 3,20</b> (1,91-5,66)</p> <p>Increase in uptake: 4% ( -1,3, 9,1%)</p>

# Interventions to increase flu vaccination in the people with chronic conditions

Design of studies	Intervention	Grade of evidence/ Results
Cross sectional + survey Dexter et al., BMJ Open 2008 UK	Identification of practices strategies associated with high flu vaccination (practice managers, nurses, GP)	<ul style="list-style-type: none"><li>- Staff member planning the flu campaign and production of written report of practice performance : OR : 1,37 (1,1-1,71) 8 % Increase for patients &lt; 65 Y.</li><li>- Sending personal invitation to eligible patients : OR= 1,45 (1,1- 1,92), 7 % Increase, patients &gt; 65Y</li></ul>

# Interventions to increase flu vaccination in the people with chronic conditions

Design of studies	Intervention	Grade of evidence/ Results
Cross sectional + survey Blank, 2009 (UK, Germany, Italy, France, Spain)	Tel ITW: 10.009 participants  (2.000/per country)  7 seasons flu : 2001/2002 to 2008/2009	Reasons for vaccination: advice from family doctor (58%) Perception of influenza as a serious illness (52%)  Reasons for not be vaccinated: Not being to catch influenza (39,5%) Never having considered the option of being vaccinated (35,8%)

# Interventions to increase flu vaccination in the pregnant women

Flu vaccine coverage:

- Romania: 3,6%
- England: 56,6% (High risk)  
36,6% (Healthy)

# Interventions to increase flu vaccination in the pregnant women

Design of studies	Intervention	Grade of evidence/ Results
<p>No RCT</p> <p>Cross sectional studies Audits of clinical data Mouzoon et al. Am J Managed Care, 2010 USA,</p>	<p>N= 20 233</p>	<p>Reasons for not be vaccinated:</p> <ul style="list-style-type: none"> <li>- Concern about risk to unborn baby</li> <li>- Concern about risk to self</li> <li>- Concern about safety and efficacy of vaccines</li> <li>- Lack of availability of vaccine</li> <li>- Lack of inconsistent advice/offer from healthcare professional</li> </ul>
	<p><u>Providers</u> Improvement of knowledge, guidelines on practices)</p>	<p>Interventions with positive effects:</p> <ul style="list-style-type: none"> <li>- Assessment of baseline immunisation rates for each obstetrician's pregnant population</li> <li>- Encourage immunization in pregnancy by all immunization providers (primary care physicians, immunization nurses)</li> <li>- Training on vaccinations by obstetric nurses (best guidelines)</li> </ul>

# Interventions to increase flu vaccination in the pregnant women

Design of studies	Intervention	Grade of evidence/ Results
<p>Cross sectional studies Panda et al. J Maternal fetal &amp; Neonatal Medicine 2011 (USA) N= 520 pregnant women</p>	<p><u>Increasing community demand:</u> - Information participants (distribution posters in offices offering prenatal care)</p> <p><u>Increasing access:</u> availability of vaccine</p> <p><u>Providers</u> Staff education and information</p>	<p>Bias: no control</p> <p>Increasing vaccination rate from 19% to 31%</p>
<p>Repeat cross-section  Mc Carthy et al. Australian &amp; New Zealand J Obstetrics &amp; Gynecology (Australia) N=212 first year, N=240 2<sup>nd</sup> year</p>	<p>Staff education Patient information</p>	<p>- Bias: no control</p> <p>- 2010: 30%</p> <p>- 2011: 40%</p>

# Interventions to increase flu vaccination in the Healthcare workers

Design of studies	Intervention	Grade of evidence/ Results
<p>Cochrane Review</p> <p>Lam et al. 2010 (Canadian Medical Association Journal) 12 studies conducted in the USA, Canada, UK, Germany, France)</p>	<p><u>Combined interventions</u></p> <p>Education and improved access to vaccine</p> <p>Education and access and legislation and role model</p>	<p>RR: 1,2-2,43</p> <p>Personal ITW of the HCW with a member of the study :</p> <p>RR: 2,16 (1,96-2,43)</p> <p>RR: 7,06 (5,67-8,78) -8,05 (6,3-10,3)</p>
<p>Cluster RCT Geriatric health care settings</p> <p>Rothan-Tondeur et al., 2011 France</p>	<p>1,814 HCW in 20 interventional group 2,435 HCW in 23 control group</p> <p>Educational programm (information about fears, development their altruism, then promotion vaccination to answer colleagues)</p>	<ul style="list-style-type: none"> <li>- Vaccination rate to 21% to 44% according to flu season</li> <li>- HCW Interventional group: 44%</li> <li>- HCW control group: 27%</li> </ul>

# Interventions to increase flu vaccination in the children

Design of studies	Intervention	Grade of evidence/ Results
<p>No RCT</p> <p>Observational studies (Web survey)</p> <p>Flood et al. Clinical Therapeutics 2010 USA</p> <p>500 parents, representative of the US population</p>		<p>Barriers to vaccination:</p> <ul style="list-style-type: none"> <li>- Low perception of risk influenza (46%)</li> <li>- Vaccine caused influenza (44%)</li> <li>- Side effects caused by vaccine (36,6%)</li> </ul>
	<p>Information public</p> <p>Personal concern</p>	<p>Drivers of vaccination</p> <ul style="list-style-type: none"> <li>- Prevention of influenza (95%)</li> <li>- Doctor's recommendation (90%)</li> <li>- Reduction of influenza symptoms (83,3%)</li> </ul>

# Interventions to increase flu vaccination in the Adult population studies

Design of studies	Intervention	Grade of evidence/ Results
<p>RCT</p> <p>Wright et al. USA</p> <p>J General Internal Medicine 2012</p>	<p><u>Increasing community demand</u></p> <p>Electronic Personal health record</p> <p>N= 396 case N= 460 control</p>	<p>Vaccination rate from 14 % to 22%</p> <p>OR: 1,83</p>

# Conclusions: Interventions may be effective

## ✓ Personalised messages

Postcards, phone calls: in elderly people

Reminder/recall systems: in patients with chronic conditions

Electronic reminders: in adults

## ✓ Doctor's recommendations: in elderly, patients with chronic conditions

✓ Information on flu, concerns about side-effects: in pregnant women, in adults, in parents with their children

## ✓ Combined informations

Education, access to vaccine, legislation: in HCW

## ✓ Questions:

- Evaluation of efficiency on target populations
- Availability of new generation of flu vaccines
